Blitzscaling Ventures Monthly Analysis of Top Firm Deals

## Blitzscalable Companies Announcing Investment Rounds in February

### February Deal Statistics

A record month with 190 deals announced. 57 A rounds is impressive as well.

Total Deals Announced	190
Non-US Deals	47
Most Active Firm (US Deals)	Sequoia
Added to our Watch list	7

### Stage of Investments

Seed Round	47	C Round	25
A Round	57	Other	26
B Round	35		

# Trialjectory - 79/100

AI-based marketplace to help cancer patients, pharmaceutical companies and clinical trial organizers to find one another.

<b>Round Size</b>	\$5 Million
<b>Investment Series</b>	Seed
<b>Noted Investors</b>	Greylock
<b>Location</b>	California, USA
<b>Total Raised</b>	\$5 Million

Trialjectory provides a valuable and much needed service to cancer patients, pharmaceutical companies and the organizers of clinical trials. Patients searching for appropriate trials upload detailed information about their specific form of cancer, then search available trials based on the detailed parameters provided by the drug manufacturers and trial organizers

In spite of its clear utility to all classes of user, the deal fell just short of the 80-point threshold for blitzscalability, however, because we struggled to find evidence of the all-important winner-take-most element. We don't believe that any of the participants in the marketplace would have a reason to uniquely prefer Trialjectory should other similar offerings be brought to market, nor that any particular barrier to entry exists that would thwart another competitor from replicating the core offering which in large measure consists of tracking down the data pertaining to drugs and trial providers combined with effective patient acquisition. We surmise that all parties involved would likely be equally satisfied if available clinical trials could be filled qualified patients, regardless of the alternative service or platform used, and therefore conclude that multi-tenanting would be likely to occur as soon as other entrants emerged.

As a software company, Trialjectory scored predictably well on metrics like gross margin, organizational and operational scalability. We awarded it high marks for distribution for the fact that it offers trial providers a new channel with specialized search-engine-like abilities to reach eligible patients, and patients a new source of trials they may qualify for. News of this is likely to spread quickly by word of mouth among highly motivated cancer patients.

# Novi Connect- 81/100

Marketplace for suppliers of ingredients used by cosmetic products manufacturers and brands seeking inputs certified to meet various standards.

<b>Round Size</b>	\$40 Million
<b>Investment Series</b>	Series B
<b>Noted Investors</b>	Tiger Global Management
<b>Location</b>	California, USA
<b>Total Raised</b>	\$52 Million

Novi Connect is a marketplace for suppliers of chemicals used by cosmetic products manufacturers and brands seeking ingredients certified to comply with over 100 standards (eg, USDA Organic, Gluten Free, Vegan, No Animal Testing, etc). Suppliers and brands alike have an incentive to plug in to a marketplace like this which creates a winner-takes-most situation-- so they earn the maximum of 10 points here. It's worth pointing out, however, that, in contrast to other marketplaces like Airbnb, which we would also have scored 10/10, Novi's score does *not* represent the same level of blitzscaling opportunity. Airbnb created a wholly new market and unique channel when it launched, and generated opportunities for multi-directional relationships to form (buyers can become sellers, and sellers can become buyers). However, in the case of Novi Connect, suppliers are already selling through existing channels. What Novi offers them is relatively less powerful therefore -- greater efficiency as opposed to a wholly new opportunity for market expansion. In this world, sellers remain sellers alone, and buyers remain buyers.

On the dimension of Viral Growth and Distribution, we scored them 8/10 in recognition of the heavy lifting needed to sign both sides of the marketplace up to the platform. The market size for beauty products is enormous and gross margin for luxury products is high, so 10/10 for both. We awarded 8's for each of organizational and operational scalability because Novi require suppliers to achieve and maintain certification with a panoply of standards, which on the one hand makes the marketplace more appealing to buyers but on the other demands a greater level of staffing for Novi to stay on top of all this.

Finally, we question the value-add of the marketplace: Will customers be retained after initial matches have been made? In an ideal marketplace, customers continue to buy--but from different vendors each time. That's not likely to be the case here, which could lead to circumvention and reduced retention.

# Rhyme - 82/100

Collaboration platform to intelligently accelerate the prior authorization process between a network of providers, payers and patients

<b>Round Size</b>	\$25 Million
<b>Investment Series</b>	Series C
<b>Noted Investors</b>	Insight Partners
<b>Location</b>	Columbus, Ohio, USA
<b>Total Raised</b>	\$57 Million

Since the time of our podcast recording, this company we referred to as PriorAuthNow has rebranded itself to Rhyme ([www.getrhyme.com](http://www.getrhyme.com)).

Most everyone at one time or another has faced the situation of requiring a medical procedure and needing to obtain prior authorization of payment before proceeding. This is typically more complicated and time consuming than it needs to be, a problem that becomes particularly acute when the need for said care is similarly acute. Into this clear pain point in an enormous market (10/10) steps Rhyme with a platform that connects providers, payers and patients in real time to make better and faster decisions. They stress that the platform not only expedites a decision, but permits the intelligent collaboration among counterparties along the way that makes that possible resulting in more efficient healthcare outcomes for all .

The winner-takes-most element of this would result from being the first to sign up all the insurance companies, hospitals and provider groups to become the single source solution. As a Series C, we credit them with being well on their way in this process and so gave them a (10/10) in this category. They face stronger headwinds when it comes to Viral Growth and Distribution (7/10), however, because even if patients do spread the word to some degree they still face the long, slow slog of selling to large hospitals and healthcare organizations. Again, as a Series C, and solving a clear market need, we awarded them 9/10 in PM Fit. Gross Margin (10/10), Org Scalability (10/10) and Ops Scalability (10/10).

# VendorPM - 83/100

Marketplace for property managers and vendors

**Round Size** \$6 Million

**Investment Series** Seed

**Noted Investors** Bessemer

**Location** Toronto, Canada

**Total Raised** \$8 Million

The Vendorpm.com platform is designed to make life easier for property managers by allowing them to plan and manage (find service providers, perform tenders, manage contracts), building services by connecting them with a marketplace of vetted service providers. Additionally, vendor performance metrics are provided along with vendor fulfillment of a property manager's standards in important ESG areas such as diversity, environmental standards, vaccine compliance, and more.

The platform possesses the characteristics of a marketplace, so we scored it 10 in Winner-Takes-Most and 8 in Viral Growth/Distribution, and a 9 in Organizational Scalability and 10 in Operational Scalability where the principal challenges revolve around maintaining the accuracy and completeness of vendor provided compliance data.

A good, solid blitzscaling prospect in an otherwise ordinary area of business that we have added to our watch list for further research and diligence.

# Standard Metrics - 83/100

Standard Metrics standardizes and simplifies the collection of key metrics from investors' portfolio companies.

<b>Round Size</b>	\$23.7 Million
<b>Investment Series</b>	Series A
<b>Noted Investors</b>	8VC, Spark Capital
<b>Location</b>	San Francisco, CA, USA
<b>Total Raised</b>	\$29.5 Million

As investors, we love the concept behind Standard Metrics. The principal audience for the product is investors, who it enables to track portfolio company performance on a single platform. The product also simplifies the process of periodic information requests--if portfolio companies to keep their reporting up to date, such requests become far less necessary.

For portfolio companies, the product can almost be thought of as something akin to "investor relations in a box." It greatly simplifies investor communications and likely reduces the need for (or at least the time spent on) creating monthly investor update newsletters or responding individually to similar questions and one-off requests for information from investors. Companies using the product report gaining valuable business insights as well an improvement in the way they measure critical metrics in accordance with industry-standard best practices.

Is the market large enough? People wondered the same when Carta first emerged as Shares, and it is now growing nicely as the rising tide of venture investing lifts all related boats --so we gave it a 9/10 on Market Size. It will enjoy a platform network effect resulting in us giving it a 9 in Winner Takes Most, and the extreme virality that should occur as investors require portfolio companies to standardize on the platform gives it a 9 on Viral Growth and Distribution as well. We scored it 9 on PM-Fit since we know the problem well and the need for such a solution--whether or not we invest, we're likely to become a customer! On Gross Margin, Org and Ops Scalability we scored it a 10/10 as a software company.

# Flashfood - 84/100

Flashfood is a mobile shopping platform connecting grocery stores with additional food to its community at a discount.

<b>Round Size</b>	\$12.3 Million
<b>Investment Series</b>	Series A
<b>Noted Investors</b>	General Catalyst
<b>Location</b>	Toronto, Canada
<b>Total Raised</b>	\$16.3 Million

When the sell-by date posted on food in grocery stores has passed, that's not an automatic indicator that the product is no longer fit for consumption. It simply means it can no longer be sold. Finding an off ramp for these perfectly good products benefits grocers and consumers alike.

Flashfood enables grocers to send out flash alerts and special offers to users on the platform when products remain unsold after their sell-by date. Stores move inventory that would have gone unsold, and consumers enjoy lower prices, while fewer precious resources go to waste.

The business model represents the combination of a landgrab and network effects and scores 10/10 therefore in the winner-takes-most category as consumers will want to be on the platform with the most stores, and grocery chains will not want to manage multiple platforms and will be drawn to the one with the most consumers. While you might think this would benefit from strong word of mouth virality, that effect we believe will be tempered by consumer's reluctance to overly publicize the fact that they shopped for, and may be serving to others off- price foods.

While the US grocery market is upwards of \$800B, out of date merchandise represents but a subset of that so we scored it 9/10 on market size. After that it was 10's across the board for gross margin, organizational and operational scalability.

# Island - 84/100

Island provides cybersecurity service intended to advance or redefine cybersecurity.

<b>Round Size</b>	\$100 Million
<b>Investment Series</b>	Series A
<b>Noted Investors</b>	Sequoia, Insight Partners
<b>Location</b>	Dallas, Texas, USA
<b>Total Raised</b>	\$100 Million

Does the world need another browser? Probably not, you'd likely reply. And that's what we thought as well until we heard tell of Island's brilliant solution and concluded that the enterprise surely could use a better browser.

In cybersecurity, the limiting factor is typically the careless mistakes of uneducated users. No matter how effective your system, when employees use standard web browsers to visit unsecure sites, check their social media accounts, and save their passwords, they are at risk.

Into this space of glaring weakness of current offerings steps Island with its enterprise secure browser. Built in Chromium, which is based on Chrome, it's designed to be used by employees at work. Their behavior won't change--they'll still use standard browsers to visit their preferred public sites--but they'll use Island and be required to only use Island when logging on to company platforms and using applications (Salesforce, SAP, etc) whose security is of mission critical importance to the company.

It earns 10/10 in winner-takes-most because employers will mandate its usage and it will become the default. They'll still have to battle it out to get the Enterprise accounts, however, so 8/10 on Distribution and Viral Growth was the best we could confer. As a Series A deal, we judge PM fit to still not be entirely cemented and allotted it 8/10.

For the final variables, Island holds a strong hand with 4-of-a-kind for Market size, Gross Margin, Ops and Org Scalability all scoring 10s

# Heygo - 87/100

Travel-specific live-streaming platform designed to allow local guides to share the places they know best with tourists at home.

<b>Round Size</b>	\$20 Million
<b>Investment Series</b>	Series A
<b>Noted Investors</b>	Northzone Ventures, Lightspeed Partners
<b>Location</b>	London, UK
<b>Total Raised</b>	\$22 Million

Heygo is tackling the virtual experiences element of Airbnb by allowing people to become virtual tour guides and take people on virtual tours to see the sights and sounds of their part of the world. What's brilliant is that they've taken a tip-based approach to monetization, so users don't have to pay anything to go on a Heygo tour; but they do create a social expectation to tip and encourage participants to reward the guide with \$2-5 per tour. It's an attractive proposition for guides who can put together a good sized group.

Its' winner-take-most (10/10) because of the race to the be the first to sign up the tour guides (who are analogous to the hosts on Airbnb). Guides will want to join the platform with the largest audience possible, and users will join the platform with the most tour options. Now that people are used to doing more virtually, Heygo could open up a market for seeing places up close that they're curious about but realistically will never visit. Viral growth and Distribution (9/10) results from the freemium model that makes it much easier to spread combined with the likelihood that people arranging a tour would be likely to invite friends to join them. Product Market fit (8/10) --it' still early, we haven't tried it so can't fully vouch for the experience yet, so this score could even be increased. Market size (9/10) could be large, but not likely unbounded, given that people will probably still prefer to see things in person. So, it's a niche in the larger travel market.

And once again, Heygo benefits from the "holy trinity" of software: Gross Margin (10/10), Org Scalability (10/10), Ops Scalability (10/10).

# Portals Labs- 93/100

A browser-based metaverse project allowing users to build and customize virtual spaces in a downtown metro area while exploring and interacting

**Round Size** \$5 Million

**Investment Series** Seed

**Noted Investors** Greylock

**Location** California, USA

**Total Raised** \$5 Million

Portals labs offers an easy "in-the-browser" Metaverse. Granted, the term Metaverse, already being used in so many crazy ways, may rightfully fill you with dread by now. Essentially, they are creating a 3D, or isometric, world with a very "Minecraft" or "Robloxy" kind of aesthetic where you can interact with others, play various games, and interact with your virtual environment. Is this meaningfully different from any of the other attempts to build Metaverses? Not really. That's why in this instance it's more a measure of the opportunity than of the company per se.

Is the Metaverse a winner-takes-most market? Yes, (10/10) because people want to go where their friends are. Is there viral growth and distribution? Yes, (10/10) because, again, people want to go places together and will tell friends to join them, and even more so if they've built up their own space in the Metaverse that they'll want to tell people about it so they come visit.

We ding this heavily on PM Fit (7/10) because it's still so early, so there's still time to revise this upwards as we see what unfolds. Will it have the PM Fit for casual social interaction that goes beyond merely interacting with the virtual environment? Still unknown. Do we need another Metaverse--Minecraft and Roblox are Metaverses--why do we need one more? But the metaverse market size opportunity (10/10) is so promising because it could be huge if it becomes the way people interact with one another in the future. So, the billion dollar question for Portals is will it achieve high PM Fit, and "will it be the one that actually takes off," and goes on to become as large as Roblox?

As an online software business, the "holy trinity" once again applies: Gross Margin (10/10), Org Scalability (10/10) and Ops Scalability (10/10).

# February Deals

As reported by Crunchbase for the VC firms we track

Organization Name	Organization Description	Round	Money Raised (USD)	Announce Date	Total Funding Amount	Lead Investors	URL	Location
Kenko Health	Kenko Health is a health insurtech startup.	Series A	\$12,000,000	2/15/2022	\$13,700,000	Sequoia Capital	<a href="https://kenkohealth.com/">https://kenkohealth.com/</a>	Mumbai, Maharashtra, India, Asia
The Expert	Operator of an online marketplace for interior design intended to connect top interior designers from across the globe via video consultations. The company provides personalized advice, guidance, and support from a top home expert via video call, thereby breaking down the traditional barriers that have existed between top interior designers and clients and eliminating the need for a high budget or a full-service requirement.	Series A		2/1/2022	\$3		<a href="http://www.theexpert.co">www.theexpert.co</a>	Los Angeles
Marigold Health	Operator of a social network community platform intended to offer text-based group therapies for mental health support programs. The company's platform offers anonymous text support groups where persons with mental health and substance use conditions can support each other and formulate plans with coaches who are all in recovery themselves, enabling patients to access on-demand group therapies and thereby receive stigma-free support to recover from mental health issues.	Seed	\$6	2/1/2022	\$8		<a href="http://www.marigoldhealth.com">www.marigoldhealth.com</a>	Boston
Midas (Brokerage)	Operator of a stock trading platform intended to offer commission-free investment opportunities to investors. The company's platform allows to buy and sell stocks of renowned stock exchanges and facilitates tracking of investments with live data, thereby enabling investors to easily invest in stocks.	Seed	\$11	2/7/2022	\$12	Earlybird Venture Capital	<a href="http://www.getmidas.com">www.getmidas.com</a>	Istanbul, Turkey
Trialjectory	Operator of an AI-based healthcare platform designed to connect cancer patients with the right clinical trial. The company's platform is an AI-based trial matching platform that uses self-reported clinical information to facilitate clinical trial search, matching and enrollment by cancer patients and their physicians, enabling patients to get access to advanced care in clinics.
